Amendments to the Specification:

[34] FIG. 5 illustrates a still further embodiment of the present invention. The power distribution system 100 of FIG. 5 includes a 5,000 watt load 102 and sources 24, 26, 27, 28, 30, and 32. The system 100 also includes an interconnect arrangement 104 that connects the load 102 to each of the power sources. Since there are six power sources, each capable of providing 100-1,000 watts of power, and a load which may consume up to 5,000 watts of power, the load 102 will be fully powered even if one of the sources should fail.
